

ABSTRACT OF THE DISCLOSURE

The invention related to a method for matching reception equipment (2) with a plurality of security modules (6, 8) each having a unique identifier.

5

The method according to the invention comprises the following steps:

- connecting a security module (6, 8) to the reception equipment (2),
- memorising the unique identifier of the connected security module (6, 8) in the reception equipment (2), on the fly.
